

BUSINESS INTELLIGENCE & DASHBOARDS

EASY AND ACCESSIBLE DATA REPRESENTATION AND ANALYSIS

RPS Business Intelligence module has a powerful tool (**Query Designer**) to generate data queries and represent them in different ways (graphs, KPIs, grids, etc.), at a general level or referring to an entity (projects, clients, suppliers, etc)

RPS has panels or Dashboards where you can have queries or graphs for the user. The user will be able to access these dashboards through the browser and any device.

Benefits

- Have useful information in real time.
- Give to non-expert users the ability to autonomously extract, debug, consolidate, synthesize and present the information.
- Provide to users the information necessary for analysis and immediate decision making.
- Accessibility to information, from any device, in real time.
