# INTEGRATION (with engineering)
SMART CAD INTEGRATION

RPS Engineering Connector is an Addin that enables native integration with different CAD solutions.

Engineering users work directly on their CAD environments, viewing the information currently available in the ERP.

The information is entered only once by the person who generates it, and all the engineering-relevant data defined through CAD solutions become available in the ERP environment for subsequent processes within the value chain.

Benefits

- Online integration. The engineering-relevant data defined in the CAD flow directly in the ERP (BOM, Article creation, quality patterns)

- Engineering users work directly on their CAD environments, and with access to the information currently available in the ERP.

- Control of changes and versions in files, synchronized with the real situation in the ERP.

- Reduction of non-productive time and elimination of errors

- Improvement in decision making: Technical office has information on costs, logistics, state of materials**.**
