

PRODUCT CONFIGURATOR MAKE TO ORDER MANUFACTURING

The product configurator is the ideal tool for companies that manufacture on demand based on a portfolio of features, and standard components that are ran by rules of exclusivity, obligation or incompatibility.

After completing a questionnaire, a configured product will be generated which will be transferred to an offer or generate a new product and production process.

Benefits

- Enable the manufacturing of a customized product for each customer in a rational way.
- Elimination of time and errors in the preparation of offers.
- Automatic calculation of offers and documentation.
- Automatic creation of references and bills of materials.
- Customer or commercial autonomy to configure a product, without the need for a technical office.
